TEACHER PLANNING GUIDE

Bring learning into the landscape.

A practical guide to planning a tailored school residential in Piemonte, north-west Italy.

Environmental science. Storytelling. Teamwork. Discovery.

- Recommended international format: five days and four nights.
- Typical class groups: 20-30 pupils; groups of approximately 15-80 considered.
- Available throughout the year. Dates and programme fit are confirmed with Adam.

Start with a conversation

Tell Adam your school, pupil ages, group size, preferred dates and learning aims. He replies personally within 24 hours.

TEACHER PLANNING GUIDE

One landscape.
Many ways to learn.

Shape the balance around your pupils, curriculum and group aims. Field science can sit alongside creative, sensory and practical experiences.

Science, ecology and environment

Observe habitats, practise field methods and investigate ecological relationships.

Service education

Contribute to a locally agreed community or environmental project.

Storytelling and drama

Use myth-making, role-play and environmental art to explore place and perspective.

Teamwork and challenge

Develop cooperation, practical problem-solving and confidence through shared tasks.

Mindfulness and nature awareness

Use attention, observation and sensory discovery to deepen connection with place.

Wilderness and ecoliteracy

Explore living systems through sustained outdoor enquiry and group reflection.

Useful learning outcomes

Discuss evidence, choose and review methods, communicate findings, work as a group and connect classroom ideas to real landscapes. The exact objectives and level are agreed with the school.

TEACHER PLANNING GUIDE

A five-day journey

An illustrative five-day/four-night structure, not a fixed itinerary. Adam adapts the locations, methods and sequence to your pupils, season, weather and learning aims.

01

Arrive and connect

Meet the team and landscape, establish group expectations and begin observation and place-based enquiry.

02

Explore habitats

Investigate suitable terrestrial or aquatic environments. Practise observation, recording and agreed field methods.

03

Investigate and interpret

Develop a focused question, collect appropriate data, discuss limitations and make sense of findings together.

04

Create and collaborate

Combine deeper enquiry with teamwork, practical challenges, storytelling or environmental art, as agreed.

05

Reflect and bring it home

Share discoveries, review learning and agree how pupils will use the experience back at school before departure.

Shorter visits, seven-day/six-night residentials and multi-week programmes can also be discussed. International travel arrangements may affect the time available for activities.

PROGRAMME EXAMPLE

Field science in practice

Beau Soleil College

EcoWise Italy publicly documented its tenth annual environmental science and field sampling trip with Beau Soleil College in October 2026.

Representative EcoWise Italy fieldwork photograph; not identified as the Beau Soleil trip.

- Five days of intensive, interdisciplinary science.
- Established field methods for sampling terrestrial and aquatic environments.
- Data collection for students' DP internal assessment projects in biology and environmental studies.

What this can mean for your school

A focused residential can create sustained time for practical investigation and theoretical learning. Discuss your assessment requirements and appropriate activities directly with Adam; the school retains responsibility for assessment decisions.

TEACHER PLANNING GUIDE

Planning made clearer

EcoWise Italy

Designs and delivers the educational programme, selects the site, checks availability and books accommodation and food on the school's behalf. This coordination is included in its service, with no extra EcoWise coordination fee.

Your school

Shares the group details, approves the programme and bookings, arranges main travel and maintains its supervision and insurance arrangements. EcoWise Italy may coordinate local transport where agreed.

Separate payments

For direct bookings, the school normally pays three invoices: the EcoWise programme; accommodation and food; and travel. A school-travel operator may instead package the trip and pay suppliers.

Insurance and planning evidence

EcoWise Italy holds public liability insurance and can provide evidence privately during planning. It does not provide travel insurance. Request the relevant programme, risk, safeguarding and cancellation information during planning.

Group size and adults

A usual planning ratio is one accompanying adult for every 10 pupils. Confirm the exact staffing for the ages, activity and location; this is not a universal ratio for every programme.

Dates and price

Delivery is available year-round. November-March often offers more flexibility. Every date requires a calendar check and every programme receives a bespoke per-person quote.

EcoWise Italy is the specialist educational provider, not an ATOL-protected travel organiser. Confirm any package protection and travel insurance with your travel provider.

TEACHER PLANNING GUIDE

Your first planning conversation

You do not need a complete trip brief. These details are enough to start a useful conversation with Adam.

School and contact

School name, country, your role and the best email or phone number.

Your group

Pupil ages or year groups, estimated number of pupils and accompanying adults.

Dates and duration

Preferred dates or season, date flexibility and how long you would like to stay.

Learning priorities

Science or fieldwork objectives, assessment context, teamwork, creativity or another programme focus.

Practical requirements

Any initial access or dietary planning questions. Do not send pupil names or sensitive medical information in the first enquiry.

Tell Adam what you have in mind

Tell Adam your school, pupil ages, group size, preferred dates and learning aims. He replies personally within 24 hours.
